TYPES OF MARBLES USED

Caliza Capri	Negro Marquina	Emperador Claro	Piedra Borriol	Travertino Crema
				
Crema Marfil	Beige Sahara	Emperador Oscuro	Azul Extremadura	
				

INSTALLATION, MAINTENANCE AND CARE

We do not recommend grouting.
The use of a special adhesive class C2 or two-component Epoxy adhesive for natural stone is required.
We highly recommend care your marble Sapphire Stones with any natural stone cleaner.

Don't use vinegar, lemon juice, or other cleaners containing acids.
Don't use cleaners that contain acid such as bathroom cleaners, grout cleaners, or tub & tile cleaners.
Don't use abrasive cleaners such as dry cleansers or soft cleansers.
Don't mix bleach and ammonia; this combination creates a toxic gas.
We are not responsible for incorrect use of cleaning products.

FINISHED USED

Polished	Painted	Sandblasted	Rigato
			
A polished finish is created when a stone surface reaches it's most refined stage. It is buffed to the highest level possible, and the results are either a high shine or the actual highest level of shine that can be achieved naturally.	A painted finished is obtained by the application of metallic silver or gold paint on the surface.	In sandblasting, a high-pressure jet of siliceous sand or steel shots is applied to the area to be treated. This treatment produces a smooth abrasion, leaving the material with a slightly scratched (but not rugged) surface.	Rigato is a machine finish that gives a linear pattern cut to the stone. This finish gives an added design factor when applied to a wall.
Flamed	Bush-Hammered	Brushed	
			
A flamed finish is produced when an intense flame is fired at stone, causing the surface to burst and become rough.	A bush hammer is a specialized stone-working hammer with a head that resembles a meat tenderizing hammer. The result leaves the surface of the stone fairly smooth with small indentations.	This effect is obtained by pounding the material surface mechanically or by hand with a specific multi-pointed tool. This method creates a rugged surface full of little grazes at the impact points, giving the surface a lighter colour.
